**Southeast Asian Limnological Network (SEALNet)**

**We, the representatives from Southeast Asian countries, understand that :**

1. The tropical inland waters are as important as subtropical ones. The characteristics, biodiversity and high economic potentials of the tropical inland water confer myriad advantages for Southeast Asian communities that also contribute to the global environment.
2. The uniqueness of the inland waters brings together the Southeast Asian communities to initiate the establishment of Southeast Asian Limnological Network (SEALNet).
3. The Initiative is to provide a framework for collecting, sharing information and studying the tropical inland waters management as well as the multilateral collaboration on academic, scientific research and capacity building.
4. The overall objective of the SEALNet is to facilitate the cooperation to improve inland water management in tropical region.
5. In order to maintain the sustainability of this network, and also to bridge the communities across Southeast Asian countries, Research Centre for Limnology, Indonesian Institute of Sciences (LIPI) is assigned as the secretariat of SEALNet and the focal persons are those selected individuals from countries within Southeast Asian countries.

Endorsed by :
